Message from the Guest Editor

Chronic diseases are the leading cause of mortality and morbidity in high-income countries, and represent a growing threat worldwide. They affect people of all age groups, regions, and countries. The promotion of healthy lifestyles and the prevention of the risks associated with unhealthy behaviors and rapid unplanned urbanization (primary risk factors of chronic diseases) are urgent matters requiring advocacy.

Beyond prevention methods, the management of chronic disease is critical. The common component of chronic diseases is the long-term and complex care trajectory, coordinated by different health care services and professionals, extending into social care and the involvement of family caregivers. Tackling determinants of care trajectory in chronic disease can not only provide health care services with methods and tools to lessen the socio-economic burden of chronic diseases, but also save lives.

This Special Issue focuses on the current state of knowledge on the determinants of care trajectory in chronic disease.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2020).
